Description:

Qt Creator is a cross-platform integrated development environment (IDE) tailored to the needs of Qt developers. Qt Creator runs on Windows, Linux/X11 and Mac OS X desktop operating systems, and allows developers to create applications for multiple desktop and embedded device platforms.

It provides:

- C++ JavaScript and QML code editor
- Integrated UI designer

- Project and build management tools
- GDB and CDB debugging frontends
- Support for version control
- Support for desktop, embedded and mobile targets

My contribution:

- Modified CMake plugin to work correctly with RemoteLinux plugin
- Added possibility to ignore missing files while deploying with Remote Linux plugin
- Few very small bugfixes
