- Українська
- □□
- Čeština
- Dansk
- Nederlands
- Italiano
- Русский
- Türk
- Ελληνικά
- Español
- العربية

Technologies:

- C++
- Qt 4
- Qt 5
- QML

Description:

TAO Translator (formerly, **The Advanced Online Translator**) uses online translation services to provide translations.

Currently supported services:

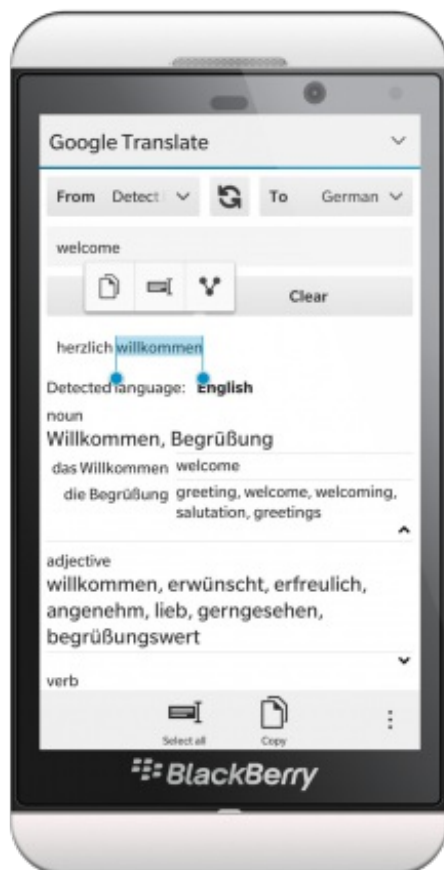

- **Google Translate** — supports translation, transliteration for most non-latin scripts, language detection, and dictionary with reverse translations for single words.
- **Microsoft Translator** (a.k.a. **Bing Translator**) — supports translation and language detection.
- **Yandex.Translate** — supports translation and language detection.
- **Yandex.Dictionaries** — supports dictionary with transcription for some languages, synonyms, and reverse translations.

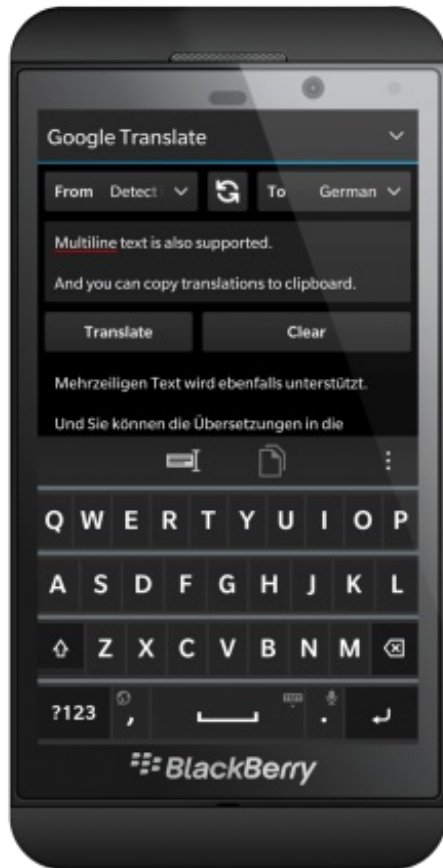

More services might be added in future.

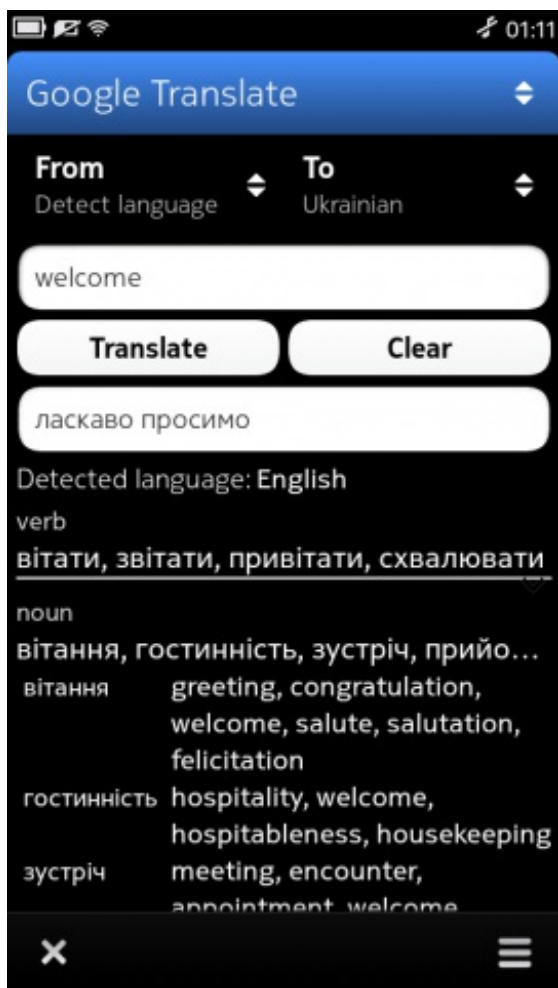

My contribution:

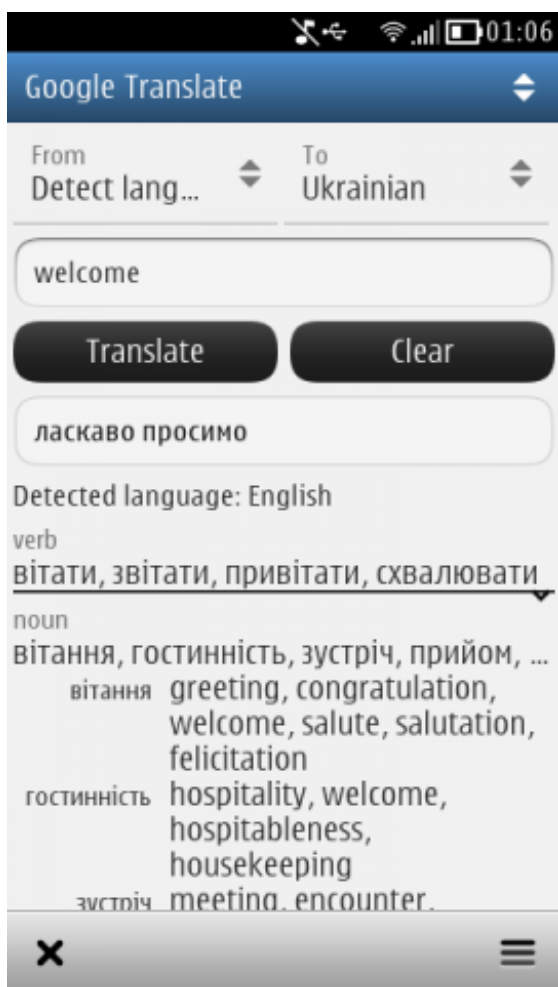

I am the author of this project.
